

## Bathroom Locking Options:

### **Bathroom Lock**

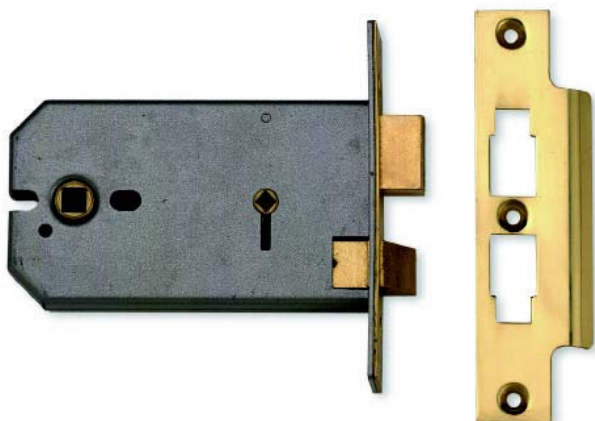

If you choose or have a bathroom lock as show above, this will work with a “handle on plate “or a “handle on rose” with a separate “thumb-turn”, both options offer emergency access.

### **Privacy**

If you have a latch in your bathroom door then you will need a “PRIVACY” handle. There is not a great choice of Privacy handles on the market as the above Bathroom Lock system is preferred. The handle may look similar but the actual locking is done in the handle itself without the need for a bathroom lock.

### **Horizontal Bathroom Lock**

This is a Horizontal Bathroom lock and is generally found in period properties, it is always used with Door Knobs. If you require Door Knobs than this is the lock to use as it give sufficient clearance to the hand when opening the door.

### **Latch and Bolt Option**

If you want a larger gap between your handle and thumb-turn then you can use a latch for the handle and a bolt for the thumb-turn. Having them spaced more than a typical bathroom lock can be more aesthetically pleasing.
